Fully Managed Mining Services Business, Central Queensland, \$7.5M + SAV

An outstanding opportunity to acquire a well-established, highly profitable mining services business operating in one of Australia's premier resources regions. Trading for more than 15 years, the business supplies, services and maintains production-critical equipment for a blue-chip base of Tier-1 resource operators under multi-year contracts.

This is a genuinely hands-off investment. The business is fully managed by an experienced General Manager and senior team, with the current owner based interstate and removed from daily operations. An incoming owner inherits a complete, functioning management structure with no need to fund a replacement-owner role.

Revenue is anchored in recurring, non-discretionary maintenance, servicing and equipment hire that continues across the resources cycle, driven by production and site activity rather than the commodity price. The business is supported by full triple-ISO accreditation, specialist technical certifications, and an exclusive supply and distribution agreement with a leading equipment manufacturer, together forming a substantial barrier to entry.
